Producer: _____ Auditor: _____ Approver: _____

CUSTOMER'S APPROVAL : _____ DCC : _____

5.0 mm ROTUNDITY LED LAMP

ESL-V50RGB010-CA

REV:A / 0

PACKAGE DIMENSIONS

Note:

1. All Dimensions are in millimeters.
2. Tolerance is ± 0.25 mm (0.010 ") Unless otherwise specified.
3. Protruded resin under flange is 1.0 mm (0.039 ") max.
4. The lamps have sharp and hard points that may injure human eyes or fingers etc., so please pay enough care in the handling.
5. ESD ≤ 500 V

CHIP MATERIALS

- * Dice Material : GaAlInP/GaAlP&GaInN/GaN&GaInN/GaN
- * Light Color : Ultra Red&Ultra Blue&Ultra Green
- * Lens Color : Water Clear

ABSOLUTE MAXIMUM RATING : (Ta = 25° C)

SYMBOL	PARAMETER	Ultra RGB	UNIT
PAD(R)	Power Dissipation	70	mW
PAD(G)	Power Dissipation	100	mW
PAD(B)	Power Dissipation	100	mW
VR	Reverse Voltage	5	V
IF	Average Forward Current	30	mA
IPF	Peak Forward Current Per Chip (Duty=0.1,1KHz)	100	mA
—	Derating Linear From 25° C	0.4	mA/° C
Topr	Operating Temperature Range	-25° C to 85° C	
Tstg	Storage Temperature Range	-40° C to 85° C	

ELECTRO-OPTICAL CHARACTERISTICS : (Ta = 25° C)

Item	Symbol	Condition	Min	Typ	Max	Unit
Forward Voltage	VF	IF=20mA	R	1.8	2.0	2.2
			G	3.0	3.2	3.4
			B	3.0	3.2	3.4
Light intensity	IV	IF=20mA	R	2000	2200	2500
			G	6000	6500	8000
			B	1000	1200	1500
Wavelength	WD	IF=20mA	R	620	623	625
			G	515	517	520
			B	465	468	470
Reverse current	IR	IF=20mA	0	/	5	uA
Viewing Angle	2θ	IF=20mA		30		deg

•SOLDERING

METHOD	SOLDERING CONDITIONS	REMARK
IR REFLOW	Bath temperature: 240℃ Immersion time: with 5 sec, 1 time	<ul style="list-style-type: none"> Solder no closer than 3mm from the base of the package Using soldering flux, "RESIN FLUX" is recommended. Attached data of temperature cure for your reference
DIP SOLDERING	Bath temperature: 240℃ Immersion time: with 5 sec, 1time	
SOLDERING IRON	Soldering iron: 30W or smaller Temperature at tip of iron: 260℃ or lower Soldering time: within 5 sec.	<ul style="list-style-type: none"> During soldering, take care not to press the tip of iron against the lead. (To prevent heat from being transferred directly to the lead, hold the lead with a pair of tweezers while soldering)

- 1) When soldering the lead of LED in a condition that the package is fixed with a panel (See Fig.1), be careful not to stress the leads with iron tip.

Fig.1

- 2) When soldering wire to the lead, work with a Fig (See Fig.2) to avoid stressing the package.

Fig.2

Regarding solution in the tinning oven for product-tinning, compound sub-solution made of tin & copper and silver is proposed with the temperature of Celsius 260. The proportion of the alloyed solution is tin 95.5: copper 3.5: silver 0.5 by percentage. The time of tinning is constantly 3 seconds.

5.0 mm ROTUNDITY LED LAMP

ESL-V50RGBC010-CA

REV:A / 0

- 3) Similarly, when a jig is used to solder the LED to PC board, take care as much as possible to avoid steering the leads (See Fig.3).

- 4) Repositioning after soldering should be avoided as much as possible. If inevitable, be sure to preserve the soldering conditions with irons stated above: select a best-suited method that assures the least stress to the LED.
- 5) Lead cutting after soldering should be performed only after the LED temperature has returned to normal temperature.

● STORAGE

- 1) The LEDs should be stored at 30°C or less and 70% RH or less after being shipped from PARA and the storage life limits are 3 months .
- 2) PARA LED lead frames are comprised of a stannum plated iron alloy. The silver surface may be affected by environments which contain corrosive gases and so on. Please avoid conditions which may cause the LEDs to corrode, tarnish or discolor. This corrosion or discoloration may cause difficulty during soldering operations. It is recommended that the LEDs be used as soon as possible.

Please avoid rapid transitions in ambient temperature, especially, in high humidity environments where condensation can occur.

•LED MOUNTING METHOD

3) When mounting the LED by using a case, as shown Fig.4, ensure that the mounting holds on the PC board match the pitch of the leads correctly-tolerance of dimensions of the respective components including the LED should be taken into account especially when designing the case, PC board, etc. to prevent pitch misalignment between the leads and board holes, the diameter of the board holes should be slightly larger than the size of the lead. Alternatively, the shape of the holes should be made oval. (See Fig.4)

4) Use LEDs with stand-off (Fig.5) or the tube or spacer made of resin (Fig.6) to position the LEDs.

•FORMED LEAD

- 1) The lead should be bent at a point located at least 2mm away from the package. Bending should be performed with base fixed means of a jig or pliers (Fig.7)

Fig. 7

- 2) Forming lead should be carried out prior to soldering and never during or after soldering.
3) Form the lead to ensure alignment between the leads and the hole on board, so that stress against the LED is prevented. (Fig.8)
